gamma zenith®

Established in Johannesburg in 1978, Gamma Zenith pioneered the development of applied wall coatings in South Africa. The company has an enviable track record of successful projects to its' credit, having built a solid reputation by taking pride in each project and always showing full commitment to each of our valued clients. From holiday resorts and luxury hotels, to high rise commercial and residential buildings, shopping centres, Government Institutions and Banks, to your home – no matter the size of the project, Gamma Zenith has always been the coating of choice.

### CHARACTERISTICS OF GAMMA ZENITH ACRYLICS

- Suitable for interior and exterior applications to walls and ceilings.
- Ideal for coastal areas and polluted atmospheres.
- Colour fast.
- Ultra-violet resistant.
- Totally water-resistant.
- Impervious to mould and fungi.
- Washable with household detergents.
- Can be applied to any surface.
- Allows walls to breathe.
- Permanent elasticity.
- No cracking, peeling or flaking.
- Covers cracks and imperfections.
- Lowest fire rating.
- Body through colour.
- Available in any colour.
- National and international distribution.
- Made in South Africa from local materials.
- Suited to commercial industrial and residential applications
- Applied by our own teams of experienced applicators
- Are designed to outlast other surface treatments such as paint and cementitious washes guaranteed for a minimum of 10 years.

## GREEN COATINGS

Environmentally friendly manufacturing processes are adhered to. Materials are mostly water based and contain no volatile organic compounds.

## GAMMA ZENITH ACRYLIC COATINGS

All GAMMA ZENITH ACRYLIC COATINGS are composed of acrylic resins, plasticisers, quartz and other chemicals, which give the product its water repellent, durable and flexible qualities.

These chemicals also ensure that the coatings are resistant to fungal attack and that colours will not fade even when exposed to harsh ultra-violet light. Though water repellent, the coatings offer a major benefit in that they allow the walls to breathe.

GAMMA ZENITH ACRYLIC COATINGS can be applied onto virtually any substrate such as oriented strand board (OSB) masonite or gypsum board, fibre cement, chip board, timber, cement plaster, concrete, brickwork, plywood, fibreglass, steel and polystyrene.

## GAMMA ZENITH CEMENTITIOUS COATINGS

- Can be manipulated to suit any style of architecture from effectively replicating an authentic "off-shutter" concrete look, to creating original Tuscan Aged finishes as shown on Palazzo Hotel Monte Casino. While cement based products have gained wide acceptance, they are prone to cracking and fading, however Gammplast has stood the test of time on numerous high profile developments over the past 15 years.

- Can be applied to most substrates including raw brickwork, face brick, terraline plaster, rough-cut (scratch) plaster and even tiled surfaces, making it a very universal product.

- Is impervious to moisture.

- Is colour fast.

## AGGREGATE FINISHES

From shimmering fine aggregate finishes to the heavy duty Giorgione stone finishes that are symbolic of the Gamma Zenith brand, we have a range of colours to suit your design. We even imbed glass chips into our trusted plasters to enhance the effect of natural or artificial light on your building.

Amidst an enormous demand for a+ grade office space in the South African business district, developers have undertaken refurbishment projects on many old style office buildings and have turned them into premium lettable space. Gamma zenith has played a major role in this process as many of these buildings require special surface preparation prior to the application of the final cosmetic finishes. The team at gamma zenith take advantage of their collective experience and provide cost effective solutions that work to achieve structurally sound façade treatments. This often requires the use of our proven preparation products and the installation of aluminium joints to create a modern block pattern.

Refurbishment

## Gamma Premix Render (GPR)

This is a high quality premix cement plaster that incorporates certain special additives and plasticisers to enhance the qualities and workability of the render. GPR is impervious to moisture unlike conventional plasters and has high MPA strength making it preferable when tiling or cladding a building. GPR is finished off to a smooth consistent finish unlike the poor plaster finishes that our industry has become accustomed to. GPR can be spray applied using "Projection Plaster" techniques – this greatly increases the efficiency of the plastering process as production of up to 300 square metres a day is achievable.

## Concrete Repair Coatings

This range has a cement based concrete repair material for mending blemishes in pre-cast or off-shutter concrete. The product that allows for holes and bad joints to be filled and blended, forms part of a range of natural bonded plasters which includes products such as decorative facings, tiles, adhesives and floor screeds. Designed to provide a hard and smooth wall finish in both interior and exterior applications, the repair material can be applied without prior surface preparations other than cleaning. Because it is composed of a blend of cement extenders, organic and synthetic binders the product offers superior adhesion qualities. It is in fact designed to combine naturally with the concrete substrate. It is also a non-combustible, does not peel or crack, is unaffected by climatic conditions and is mould and rot resistant.

GAMMA concrete repair materials are self-curing and fast drying. They are supplied as a ready mixed powder in 20 kg paper sacks. Only water needs to be added prior to application.

## Gamma Insulglue

The effectiveness of an insulation layer is often undermined by the adhesives used to glue insulation blocks or panels together. This is because these adhesives can act as conducting bridges for either heat or cold. To solve this problem a specially developed cementitious insulating adhesive known as GAMMA INSULGLUE, has been introduced. This glue, which is available in a powder form for mixing on site, incorporates cement, chemicals, adhesives and insulating material to provide a superior bond which, in addition, is non-conducting. In this way it ensures that the entire insulation layer performs to it's maximum effectiveness. It is fast drying and not affected by climate. It is also mould and rot resistant.

## INTERIOR WALL CREATIONS

Interior Wall Creations offers a unique and comprehensive range of products, servicing all specialized interior finish, including:

- Decorative wall finishes
  - Plasters
- Unique paint effects
  - Original artwork
  - Carved plaster
  - Intricate murals
- Interior wall art designs
  - Mosaic art

Working closely with each member of design, building, architecture and interior teams, Interior Wall Creations is able to translate creative ideas and client requirements and execute them into unique wall coverings that enhance and compliment any architecture design style.

Using the experience and expertise of working with specialized original materials within the field of plasters, Interior Wall Creations is the perfect finish to any project and works hand in hand with hundreds of other materials, décor and design pieces. Interior Wall Creations has worked on some of South Africa's most prestigious land marks and is renowned for their talent the world over.

*Interior Wall Creations uses world class products and interprets their best features to produce outstanding wall coverings:*

- **Marmorino Polvere:** used either independently to produce a polished stone or textured finish like travertine stone or in conjunction with other materials to produce a high quality decorative plaster.
- **Grasello:** a multi- layered finish, which has the same appearance and feel of polished marble.
- **Carved Plaster:** although organic in style, each original design creates an intricate and sophisticated finish.
- **Venetian Stucco:** slightly less polished and with a more natural, earthy look yet similar to Grasello
- **Specialised Paint Techniques:** for that extra special appeal including gold/silver leaf, gilding, colour washing, wood graining and marbling

*Characteristics of Interior Wall Creations:*

- Applied to new architecture
- Compliments refurbishments & remodelling
- Use in contemporary and classic design
- Applied to both residential and corporate
